

User Manual

Bluetooth® Audio Receiver Flush Mount

IBR64

Pairing your device (required for operation):

1. Ensure your streaming device has Bluetooth® enabled and that power is applied to the IBR64. (The blue LED on the IBR64 will blink to indicate it is in pairing mode.)
2. Within your streaming device's Bluetooth® setup menu, select "IBR64" from the list of pairable devices.
3. When successfully connected, the Blue LED on the IBR64 will stop blinking and remain lit. A single beep will be heard through the connected audio system.
4. Connecting the blue wire (remote out) to the amplifier (remote in) to turn the amplifier on/off via IBR64

Multiple devices can be paired to the IBR64, but only one streaming device can be connected at one time.

The IBR64 will remember the last device that was connected to it and reconnect with it automatically. If that streaming device is not active, then other paired streaming devices can connect manually, or new streaming devices can be paired.

When a connected streaming device is out of range for more than one minute, the IBR64 will automatically disconnect this streaming device and return to pairing mode (LED will blink).

Controlling audio playback:

1. Once connected, audio is controlled from the streaming device. This includes volume and media selection.
2. The IBR64 can be installed out of sight, as it has no user controls that need to be accessed.
