

Nissan **DSP Interface With Pre-Wired Harness** 2007–Up

INTERFACE FEATURES

- Includes a DSP (Digital Signal Processor)
- 31 Band graphic EQ
- 10 individually assignable outputs
- Independent equalization on each of the 10 outputs
- Independent high pass, low pass, and bandpass filters
- Each channel can be delayed independently up to 10ms
- Clipping detection and limiting circuits
- Can be used in amplified and non-amplified models
- · Easy behind the radio installation with pre-wired harness
- Bass knob included for level control of subwoofer amp
- Settings adjusted via Bluetooth[®] in a smart device application (tablet or mobile phone), compatible with both Android and Apple devices
- Read, write, and store configurations for future recall
- Password protect feature available in the mobile app
- Micro-B USB updatable

INTERFACE COMPONENTS

- AXDSPX-NI1 interface
- AXDSPX-NI1 interface harness
- AXDSPX-NI1 vehicle T-harness Bass knob

TOOLS & INSTALLATION ACCESSORIES REQUIRED

- Crimping tool and connectors, or solder gun, solder, and heat shrink Tape Wire cutter
- Zip ties Multimeter
 Google Play Store

Apple App Store

APPLICATIONS

Visit axxessinterfaces.com for current application list

INSTALLATION OPTIONS

Adding a sub to a factory system:

This feature offers the ability to add a subwoofer to a factory system, whether amplified or nonamplified. (refer to page 3)

Adding a full-range amp & sub to a factory system:

This feature offers the ability to add a full-range amp and sub to a factory system, whether amplified [†] or non-amplified. (refer to page 4)

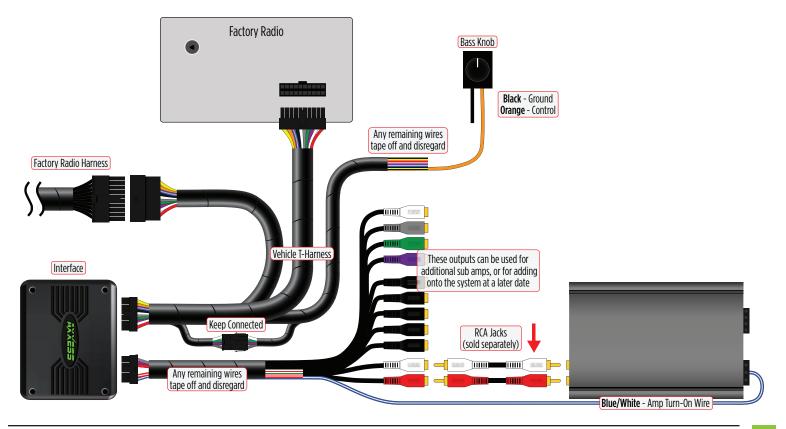

* For amplified models the amp must be bypassed/unplugged, and With OE Amplifier chosen in the Configuration tab under Vehicle Type.

Note: The interface provides a 12-volt 1-amp output to turn on aftermarket amp(s). If installing multiple amps, an SPDT automotive relay will be required if the amp turn-on current of all amps combined exceeds 1-amp. Use Metra part number $\underline{E-123}$ (sold separately) for best results.

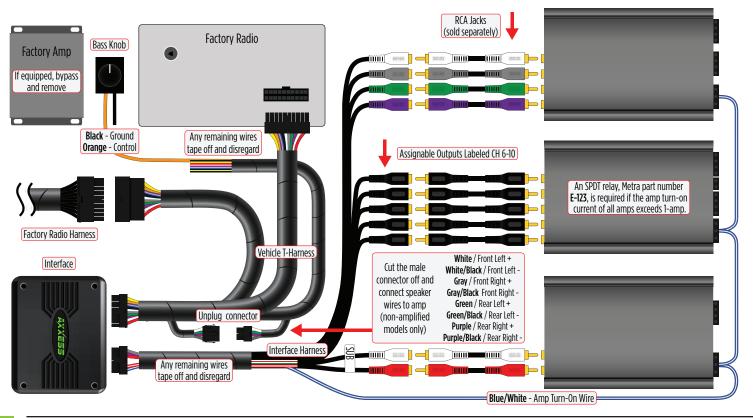

INSTALLATION

- **1.** Remove the factory radio ⁺, then unplug all connectors.
- 2. Install the **AX-DSPX-NI1 vehicle T-harness** to the vehicle and make all necessary connections, but leave the amp turn-on wire disconnected.
- 3. Plug the AX-DSPX-NI1 vehicle T-harness to the AX-DSPX-NI1 interface.
- 4. Plug the AX-DSPX-NI1 interface harness to the AX-DSPX-NI1 interface.
- Download and install the AXDSP-X app from the Google Play Store or Apple App Store.
- **6.** Open the app then select the **Bluetooth Connection** tab. Follow the instructions to pair the mobile device to the interface. Refer to <u>page 6</u> for more information.
- Scroll to the Configuration tab then select the vehicle type. Press the Lock Down ‡ button to save the configuration. Refer to page 7 for more information.
- 8. Connect the amp turn-on wire.
- **9.** Adjust the settings in the app as desired. Press the **Lock Down** [‡] button to save any new configurations.
- Refer to <u>Metra online</u> for dash disassembly. If Metra makes a dash kit for the vehicle, disassembly will be within those instructions.
- ‡ Anytime the interface is locked down the key must be cycled off then back on

ADDING A SUB TO A FACTORY SYSTEM

ADDING A FULL-RANGE AMP & SUB TO A FACTORY SYSTEM

MOBILE APP

Setup Instructions

SETUP INSTRUCTIONS	BLUETOOTH CONNECTION	CONFIGURATION	OUTPUTS		
CROSSOVER ADJUST	EQUALIZER ADJUST	DELAY ADJUST	INPUTS/LEVELS		
Using the vehicle specific harness, install the AX-DSP. The high level outputs from the OEM radio go to the inputs of the AX-DSP. The AX-DSP outputs are low level and should be connected to the amplifier inputs.					
 Power on the system, and verify audio to the front (left and right), rear (left and right), and Subwoofer. Set the OEM radio bass and treble controls for flat frequency response. Set the left/right balance to center. Set the front/rear fader to center. 					
Detailed installation instructions are available on-line. Click the button below to view the instructions					

• General information tab for installing the interface.

Bluetooth Connection

SETUP INSTRUCTIONS		BLUETOOTH CONNECTION		CONFIGURATION	OUTPUTS	
CROSSOVER ADJUST EQUALIZ			JUST DELAY ADJUST		INPUTS/LEVELS	
SCAN	Avail	able Devices				
DISCONNECT	AX-DSP-X Metra	39115816	To connect to the AX-DSP make sure the ignition is in the on position ar the AX-DSP is powered up. Hit the SCAN Button and select the AX-DSP from the available devices. Confirmation that you are connected to the DSP will show in the top left corner of the screen. To disconnect from the AX-DSP hit the Disconnect button.			

- Scan Press this button to start the Bluetooth pairing process, then select the interface once it is found. "Connected" will appear in the top left corner of the app once paired.
 - Note: The ignition must be cycled on during this process.

• **Disconnect** - Disconnects the interface from the app.

Configuration

SETUP INSTRUCTIONS		BLUETOOTH CONNECTION	CONFIGURATION	OUTPUTS			
CROSSOVER ADJUST		EQUALIZER ADJUST	DELAY ADJUST	INPUTS/LEVELS			
IDENTIFY	Click this button to identify the AX-DSP; the chimes will play						
RESET TO DEFAULTS	Resets the DSP customization settings, will not reset vehicle type. During the reset process, the amplifiers will shut off for 10 seconds, and then turn back on once completed.						
VEHICLE TYPE	Select the type of v	rehicle the AX-DSP is installed in					
LOCK DOWN	Stores the current	configuration into the AX-DSP					
SAVE CONFIG	Saves the current of	configuration to your device					
RECALL CONFIG	Recalls a configura	tion from your device and applies the rec	alled configuration to the AX-DSP				
ABOUT	Displays Information about this App and the AX-DSP						
SET PASSWORD	Changes password for accessing the AX-DSP						

- Identify Click this button to send a test tone to the front left speaker*.
 * Only installations using the front left output (white RCA jack).
- **Reset to Defaults** Resets the interface to factory settings. During the reset process the amp(s) will shut off for 5-10 seconds.
- Vehicle Type Select the vehicle type from the drop down box, then click the apply button.
- Lock Down Click this button to save the selected settings. Attention! This must be done before closing the app or cycling the key otherwise all new changes will be lost!

- Save Configuration Saves the current configuration to the mobile device.
- Recall Configuration Recalls a configuration from the mobile device.
- About Displays information about the app, vehicle, interface, and mobile device.
- Set Password Assign a 4-digit password to lock the interface. If no password is desired, use "0000". This will clear out any currently set password. It is not necessary to lock down the interface when setting a password.

Note: A 4-digit only password must be chosen otherwise the interface will show "password not valid for this device".

Output Channels

- Location Location of speaker.
- **Group** Used to join channels together for simple equalization. Example, left front woofer/midrange and left front tweeter will be considered simply left front. The letter **M** indicates the speaker assigned as the master speaker.
- Invert Will invert the phase of the speaker.
- Mute Will mute desired channel(s) for tuning individual channels.

- If installing a subwoofer, the front and rear outputs will default to a 100Hz high pass filter to keep the low frequency signals out. If
 a subwoofer is not being installed, change the front and rear crossover points down to 20Hz for a full range signal, or to the lowest
 frequency the speakers will play down to.
- Selecting High Pass and Low Pass will provide one crossover frequency adjustment. Selecting Band Pass will provide two crossover frequency adjustments, one for low pass, and one for high pass.

Equalizer Adjust

- All channels can be adjusted independently within this tab with 31 bands of available equalization. It is best to tune this by using an RTA (Real Time Analyzer).
- The **Gain** slider on the far left is for the channel selected.

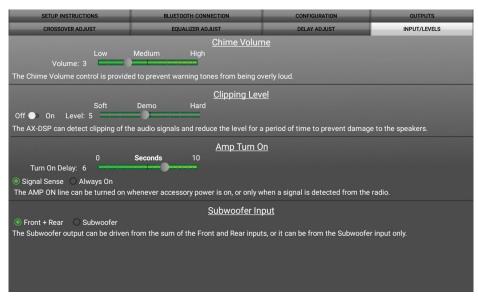

Delay Adjust

SETUP INSTRUCTIONS		BLUETOOTH CONNECTION	CONFIGURATION	OUTPUTS
CROSSOVER ADJUST		EQUALIZER ADJUST	DELAY ADJUST	INPUTS/LEVELS
Left Front Right Front Left Rear Right Rear Sub Woofer	0 0 0 0 0	Distance from each speaker to 'H	ead' position (in inches)	
Measure the distance	from eacl	h speaker to the desired 'Head' position a distance is 99		sponding boxes. Maximum

 Allows a delay of each channel. If a delay is desired, first measure the distance (in inches) from each speaker to the listening position, then enter those values to the corresponding speaker. Add (in inches) to the desired speaker to delay it.

Inputs/Levels

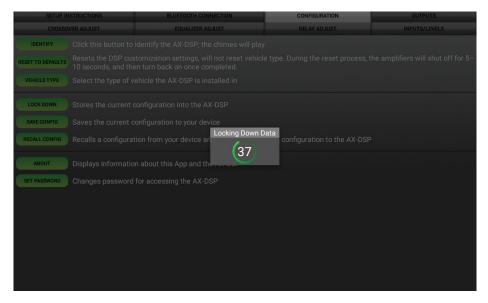

- Chime Volume Not applicable in this application.
- Clipping Level Use this feature to protect sensitive speakers like tweeters from being driven past their capabilities. If the output signal of the interface clips the audio will be reduced by 20dB. Turning down the stereo will allow the audio to come back at a normal level. The sensitivity of this feature can be adjusted to the listening preference of the user.

• Amp Turn On

- Signal Sense Will turn the amp(s) on when an audio signal is detected, and keep on for 10 seconds after the last signal. This ensures the amp(s) won't shut off between tracks.
- Always On Will keep the amp(s) on as long as the ignition is cycled on.
- Turn on Delay Can be used to delay audio output to avoid turn-on pops.
- Subwoofer Input Select Front + Rear

Locking Down Data

Last and the most important. You must lock down your configuration and cycle the key!!!
